

OneView™ Extranet

More service, less obstacles

Today's clients demands much more from their attorney relationships. From detailed time keeping reports, to up to date billing information, and increased collaboration; firms need to offer the client more than service and expertise, they need to have the technology to meet and exceed their client expectations. OneView Extranet helps you deliver on demand access to your clients anywhere and anytime.

Introducing OneView Extranet

OneView Extranet provides a secure location for attorneys and legal professionals to collaborate and share information with clients. Each client and matter can have a customized site, and any number of internal or external users can have access to the site without compromising security. Attorneys and clients can share documents, contact information, and other information through a controlled, automated and audited publishing tools. OneView Extranet provides a complete environment for automating the creation of integrated, secure client and matter extranet workspaces.

Benefits for attorneys

Clients want fast access to their information. In fact, many clients list web-based access to their documents and other information as a requirement to do business.

Using OneView Extranet, attorneys can share documents with their clients as easily as sending an email, while clients can then view and download this information from anywhere, at any time. Extranet access then becomes a competitive edge, improving the quality of service a firm provides to its clients.

On-demand information for clients

With OneView Extranet clients are able to access documents, matter details and other information through secure, simple web workspaces at their convenience. On-demand access to their information in a secure and auditable environment means less cost for information processing and distribution and a significant time savings for both client and attorney.

Features for IT professionals

OneView Extranet provides SharePoint technologists and IT pros with a complete framework that make it easy to build and deploy SharePoint-based client extranets. OneView Extranet streamlines the process for creating new client sites, creating user accounts, and assigning security. It also provides ongoing usage tracking, auditing, and reporting.
