

OneView™ Search

Search doesn't have to be complicated

Attorneys and legal professionals rely on quick and easy access to information - which isn't easy to provide, considering the rapidly increasing volumes of information both inside and outside of a firm. Knowledge management and IT professionals are constantly challenged to find new ways to deliver information in ways that makes it faster and easier to find, use and share.

OneView Search enables quick searching for information across multiple sources and formats, delivering an effective search tool that users find simple and intuitive. Built on Microsoft's search technology in both MOSS 2007 and Search Server 2008, OneView Search extends Microsoft search into your existing systems while respecting security, mapping metadata and optimizing content for fast, reliable indexing.

Unlike other search solutions that include overly-complicated features and components that drive up the cost and effort required to implement, OneView Search delivers what most users need - fast, relevant, and actionable search results that get them to the information they need.

Benefits for Attorneys

Attorneys want fast and simple access to information. OneView Search provides a familiar, intuitive search interface that

attorneys can use to quickly search across multiple sources of information and to refine and navigate search results by client, matter, attorney and other categories. And by integrating with legal-specific tools such as West km™, the award winning knowledge management system from Thomson West that analyzes and combines a firm's work product with Westlaw services, attorneys can gain additional insight and control over documents and related firm content.

Knowledge Management Focus

By indexing multiple sources and relating those sources through simple metadata mapping and merging, knowledge management professionals are able to deliver search solutions that provide answers that any one system can't answer alone. For example, by indexing documents, client/matter and attorney information together, users can search for attorneys based on the work product they have produced, or find documents based on information about a client. Using Metadata Connectors, these relationships can be expanded further, providing all of the components necessary to deliver expertise systems, knowledge bases, forms databases and other knowledge management tools - all using a single platform and software investment.

Features for IT Professionals

OneView Search integrates directly into SharePoint's native administration interfaces, making it easy and familiar to create new content sources and customize the application to meet the needs of attorneys and users. Also included are advanced tools for monitoring and troubleshooting the index process, which is critical in environments with millions of documents and searchable content.

Administrative features

- ◆ Index structured content, unstructured content, or combination of both
- ◆ Optimized full and incremental indexing processes, enabling rapid index of large volumes of content
- ◆ Content source metadata mapping and merging using Metadata Connectors
- ◆ Automated security mapping to Active Directory for index security
- ◆ Administrative tools integrated into SharePoint Central Administration

Enhanced user experience

- ◆ Enhanced OneView Search Center site template
- ◆ Customizable faceted navigation of search results
- ◆ Context-sensitive actions on search results, powered by OneView Connect
- ◆ MOSS Search Results connector for OneView Connect for dynamic, contextual search throughout a SharePoint environment
- ◆ Federated search using OneView Connect RSS/OpenSearch API

Search and Metadata Connectors

- ◆ Interwoven Worksite
- ◆ OpenText eDocs and DOCS Open
- ◆ OpenText LegalKEY
- ◆ LexisNexis Interaction
- ◆ Thomson West km
- ◆ PTI RealPractice
- ◆ Any SQL Server, Oracle, ODBC or OLEDB data source
