

## OneView™ Connectors for Interwoven Worksite

### Put Worksite to work in SharePoint

With XMLAW's OneView connectors for Interwoven Worksite document management, you find, use and share Worksite content from directly within your SharePoint sites and applications.

XMLAW has been an Interwoven technology partner since 2004, when XMLAW released the industry's first integration package for Worksite and SharePoint.

### Secure, real-time integration

The OneView application connector for Interwoven Worksite provides secure, real-time access to virtually all document content and functionality from SharePoint using a collection of customizable web parts and application components.

OneView provides both client and server-based integration components in order to provide a rich experience for users, with seamless document check-in, check-out and document profiling.

### Unified search

The OneView Search connector for Interwoven Worksite uses Microsoft search technology to securely index all Worksite content, providing a unified search experience for users that delivers relevant results from Worksite and other sources at the same time.

### Client and matter centrality

Create dynamic client and matter workspaces that automatically connect to corresponding Worksite matter workspaces, extending "matter centrality" beyond documents by integrating Worksite together with all client/matter information into a single view.

### A comprehensive suite for SharePoint

OneView Connectors for Interwoven Worksite include everything you need to fully leverage Worksite using OneView Connect, OneView Search and the SharePoint platform. Out-of-the-box components include:

- ◆ Application connector for secure, real-time access through OneView Connect
- ◆ Suite of preconfigured, customizable SharePoint web parts
- ◆ ActiveX component for client integration
- ◆ SharePoint application pages for web-based access to Worksite
- ◆ Search connector for OneView Search provides secure, high-performance indexing

### Summary of features

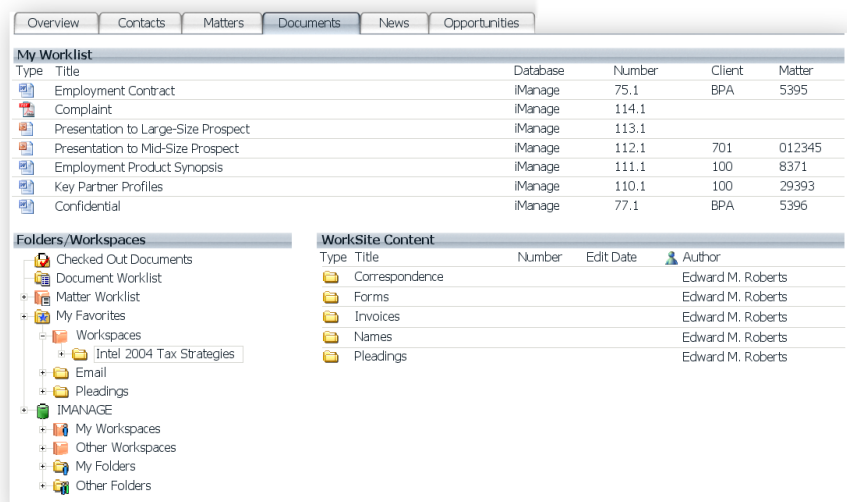

- ◆ Respect all Worksite security through SharePoint and single sign-on
- ◆ Browse/select any Worksite content directly from SharePoint sites and pages
- ◆ Check-in, check-out and profile documents
- ◆ Integrate document workspaces, tabs and folders with SharePoint sites
- ◆ Securely index and search document content and profile across libraries

### Application connector requirements

- ◆ Windows SharePoint Services 3.0 or Microsoft Office SharePoint Server 2007
- ◆ OneView Connect Enterprise
- ◆ Worksite server v7.x or later
- ◆ Worksite client software, any version, for client-mode integration

### Search connector requirements

- ◆ Microsoft Office SharePoint Server 2007 or Microsoft Search Server 2008
- ◆ OneView Search
- ◆ Worksite server v7.x or later

Create integrated SharePoint applications using Worksite content and functionality.
